798: Other, specify	68
Summary	73
Appendix	74

Background/Purpose

In response to feedback received from the transplant community and at the recommendation of the OPTN Ad Hoc Systems Performance Committee, the OPTN Data Advisory Committee updated the list of options under the primary refusal and secondary refusal reason code drop downs in the offer details form section of DonorNet. Last revised in 2004, the new proposed list of refusal codes has incorporated multiple rounds of feedback received from various stakeholder groups, OPTN committees, and the larger transplant community between 2019-2021. The updated list intends to further the strategic priority of increasing donor and recipient matching by improving the refusal reason data used for quality improvement, retrospective reviews, and real-time decision making. By providing more relevant and granular options, the insights gathered will be more actionable and improve upon the current list by reducing the overutilization of the refusal code “donor age or quality” which accounted for 66% of the primary refusal reasons entered between July 2019 and June 2020. These revisions did not change or add data collection, but provide a revised list of options that are more relevant, discrete, and mutually exclusive, to promote the collection of more actionable data. A crosswalk between previously used and new refusal codes is provided in Figure 1.

Strategic Plan Goal or Committee Project Addressed

Increase the number of transplants by efficient donor/recipient matching.

Committee Request

The OPTN will analyze data beginning at three months after implementation of the new refusal codes, allowing for two months of data with the first review. In order to facilitate monthly updates, the results will be provided to the committee via a standard report or dashboard for two years, with a presentation of updated results to the committee quarterly for the first year and a final report presentation at the end of year two.

The first two items below will be provided overall, by match organ type, size of program (small, medium, large) as defined by transplant volume in calendar year 2020, and relative location on match run. Stratifications of location on match run will be done by match organ type, and before or after the 90th percentile for rank of acceptances in calendar year 2020 for that organ type. The analysis will include:

- The percentage of patient-specific refusals by reason, to identify any code not being used or making up an unexpectedly high proportion of the total (suggesting that it has become a new, nonspecific catch-all code).
- Limited to range refusals (center refusing for multiple patients at same time), the percentage by reason to identify any code making up an unexpectedly high proportion of the total (suggesting that it has become a new, nonspecific catch-all code).
- A review of the cases (stratified only by match organ) where the “other/specify” text field was used, to identify any manually-entered reasons not currently in the list and making up a significant proportion of the total “others”. This will identify any additional codes needing to be added to the updated list. Due to the manual effort required, this portion of the analysis will be updated quarterly during the first year, and once in year two of implementation.

Additionally, UNOS staff will provide feedback on questions received from members related to the new refusal codes.

Figure 1: Crosswalk overview of changes between previously used and new refusal codes available to transplant hospitals following December 2021 implementation

PREVIOUS REFUSAL CODE	NEW REFUSAL CODE
800 - Patient's condition improved, transplant not needed	722 - Candidate's condition improved, transplant not needed
801 - Patient ill, unavailable, refused, or temporarily unsuitable	720 - Candidate temporarily medically unsuitable 727 - Candidate unavailable 728 - Candidate refused
802 - Multiple organ transplant or different laterality is required	723 - Candidate requires different laterality 724 - Candidate requires multiple organ transplant
803 - Patient txed, tx in progress, or other offer being considered	721 - Candidate transplanted or pending transplant
810 - Positive crossmatch 813 - Unacceptable Antigens	732 - Positive physical crossmatch 733 - Positive virtual crossmatch/unacceptable antigens
811 - Number of HLA mismatches unacceptable	734 - Number of HLA mismatches unacceptable
812 - No serum for crossmatching	730 - No candidate serum for crossmatching 731 - No donor cells/specimen for crossmatching, or no time for crossmatch
814 - High PRA 815 - High CPRA	Removed
820 - Heavy workload 823 - Surgeon unavailable 825 - Operational – transplant center	760 - Resource time constraint (OPO, TXC, donor hospital, etc.) 762 - Recovery team availability 763 - Transplant team or transplant facility availability
822 - Exceeded one hour response time 826 - Exceeded 30 minute evaluation time	765 - Exceeded policy defined response time
824 - Distance to travel or ship	712 - Actual or projected cold ischemic time too long
830 - Donor age or quality	700 - Donor age 713 - Warm ischemic time too long 750 - Donor medical history, specify* 751 - Donor instability/high vasopressor usage 752 - Prolonged downtime/CPR 754 - VCA graft appearance or quality, specify**

831 - Donor size/weight	701 - Organ size, specify**
832 - Donor ABO	Removed
833 - Donor social history	740 - PHS risk criteria or social history
834 - Positive serological tests	742 - Donor infection or positive culture 741 - Positive infectious disease screening test: CMV, HBV, HCV, etc.
835 - Organ Preservation	710 - Organ preservation: Unacceptable method or findings
836 - Organ anatomical damage or defect	711 - Organ anatomical damage or defect 715 - Biopsy results unacceptable
837 - Organ-specific donor issue	714 - Biopsy not available 716 - Organ specific test results not available, specify** 717 - Unacceptable organ specific test results, specify* 743 - Malignancy or suspected malignancy
840 - COVID-19: candidate-related reason	725 - Epidemic/Pandemic - Candidate
841 - COVID-19: donor-related reason	744 - Epidemic/Pandemic - Donor
842 - COVID-19: OPO or transplant hospital operational issue	763 - Transplant team or transplant facility availability
860 - Medical urgency of another potential recipient	Removed
880 - Kidney placed with extra-renal	Removed
898 - Other Specify	798 - Other Specify* Note: 799 - Other Specify* is the replacement Other Specify for bypasses. 898 previously served as both the refusal and bypass code.
New Codes	726 - Candidate temporarily ineligible due to insurance or financial issue 753 - DCD donor neurological function/not expected to arrest 761 - Donor family time constraint 764 - Transportation availability 790 - Disaster Emergency Management

Data and Methods

These analyses use OPTN potential transplant recipient (PTR) match run data and include roughly 364 days before and after implementation on December 2, 2021, at 7:59:53 AM. Transplant candidate organ offers between December 03, 2020 and December 02, 2021 (pre) or between December 02, 2021 and December 01, 2022 (post) on matches with at least one final acceptance were used.

Only offers prior to the final acceptor with a refusal were included, organ offers that were bypassed or provisional yes at the close of the match were excluded. Note that offers for candidates on heart-alone organ matches and heart-lung organ matches were combined to heart-lung match organ type, since heart-alone matches are only run if no viable lungs available from the donor.

Figures present top reasons for refusal of organ offers, and associated tables are given either in the Results section or at the end of the report in the Appendix. Figure colors represent the broader category that can describe each type of refusal reason.

Analyses are based on OPTN data as of April 14, 2023 and are subject to change based on any future data submission or correction.

Results

Pre-implementation Review

Prior to the updates to the refusal reasons, the most frequently used reason for refusal of an organ offer across all organs, excluding intestine, was '**Donor age or quality**'. This refusal reason accounted for over 60% of refused offers for kidney and liver match runs, over 55% of refused offers for lung and kidney-pancreas, almost 50% of heart-lung, and 15% of intestine match runs, pre-implementation. Effective March 25, 2020, three new refusal codes were established to document refusal of an organ offer for a transplant candidate for COVID-19-related reasons:

- 840: COVID-19 candidate-related reason
- 841: COVID-19 donor-related reason
- 842: COVID-19 OPO or transplant hospital operational issue

The second of these became one of the top five given reasons for refusal for **kidney** match offers pre-implementation. In prior monitoring reports, the pre-implementation period was of shorter duration, and this **841: COVID-19 donor-related reason** code appeared more frequently in the list of top five reasons for other organs besides kidney. However, shifts in pandemic burden and the public health response over time seem to have shifted the degree to which this code was used when additional pre-implementation months were considered in this report. Organ preservation, distance to ship, donor size/weight, and other organ-specific donor issues were among top reasons across organs.

Table 1: Top five reasons for refusal of organ offers for transplant candidates prior to implementation by match organ type, December, 03, 2020 - December, 02, 2021

Refusal Reason	N Offers	% Offers per Organ
Kidney match organ		
Donor age or quality	1,663,928	67.4%
Organ Preservation	208,889	8.5%
Organ-specific donor issue	161,598	6.5%
COVID-19: donor-related reason	117,637	4.8%
Organ anatomical damage or defect	97,207	3.9%
Liver match organ		
Donor age or quality	226,851	66.7%
Donor size/weight	26,660	7.8%
Distance to travel or ship	13,988	4.1%
Patient ill, unavailable, refused, or temporarily unsuitable	12,354	3.6%
Other Specify	12,055	3.5%
Heart-Lung match organ		
Donor age or quality	31,228	45.8%
Donor size/weight	18,534	27.2%
Distance to travel or ship	3,586	5.3%
Patient txed, tx in progress, or other offer being considered	2,731	4.0%
Organ-specific donor issue	2,407	3.5%
Lung match organ		
Donor age or quality	28,415	59.2%
Donor size/weight	8,635	18.0%
Multiple organ transplant or different laterality is required	3,539	7.4%
Organ-specific donor issue	2,189	4.6%
Other Specify	1,606	3.3%
Kidney-Pancreas match organ		
Donor age or quality	6,324	55.6%
Multiple organ transplant or different laterality is required	1,580	13.9%
Distance to travel or ship	900	7.9%
Patient ill, unavailable, refused, or temporarily unsuitable	658	5.8%
Donor size/weight	318	2.8%
Intestine match organ		
Multiple organ transplant or different laterality is required	565	64.3%
Donor age or quality	179	20.4%
Donor size/weight	43	4.9%
Number of HLA mismatches unacceptable	40	4.6%
Patient ill, unavailable, refused, or temporarily unsuitable	20	2.3%

Patient-specific Refusals by Reason

Overall

Since the implementation of the new codes, the most frequently used reason for refusal of an organ offer for a transplant candidate has been 'Actual or projected cold ischemic time too long' (18.7%) followed by 'Unacceptable organ specific test results, specify' (14.6%). Interestingly, the other updated COVID-19 related refusal reasons, 'Epidemic/Pandemic - Candidate' and 'Disaster Emergency Management Consideration' have only been used for refusal of 3504 (0.1%) and 1023 (0.03%) organ offers for a transplant candidate overall.

Figure 2: Reasons for refusal of an organ offer for a transplant candidate post-implementation, all match organs, December 02, 2021 - December 01, 2022

By Organ

Candidate Specific	Epidemic/Pandemic - Candidate	58	0.52%
Logistics	Recovery team availability	57	0.51%
Disease Transmission Risk	Positive infectious disease screening test: CMV, HBV, HCV, etc.	54	0.48%
Donor Specific	DCD donor neurological function/not expected to arrest	50	0.45%
Candidate Specific	Candidate refused	44	0.39%
Candidate Specific	Candidate unavailable	34	0.30%
Candidate Specific	Candidate temporarily ineligible due to insurance or financial issue	29	0.26%
Histocompatibility Related	Positive physical crossmatch	25	0.22%
Disease Transmission Risk	Donor infection or positive culture	22	0.20%
Disease Transmission Risk	Malignancy or suspected malignancy	12	0.11%
Histocompatibility Related	No donor cells/specimen for crossmatching, or no time for crossmatch	12	0.11%
Logistics	Transportation availability	10	0.09%
Histocompatibility Related	No candidate serum for crossmatching	9	0.08%
Organ Specific	Warm ischemic time too long	8	0.07%
Candidate Specific	Candidate's condition improved, transplant not needed	6	0.05%
Logistics	Donor family time constraint	6	0.05%
Logistics	Exceeded policy defined response time	4	0.04%
Organ Specific	Biopsy results unacceptable	1	0.01%

Figure 9: Top ten reasons for refusal of intestine match organ offers for transplant candidates post implementation, for intestine matches submitted December 02, 2021 - December 01, 2022.

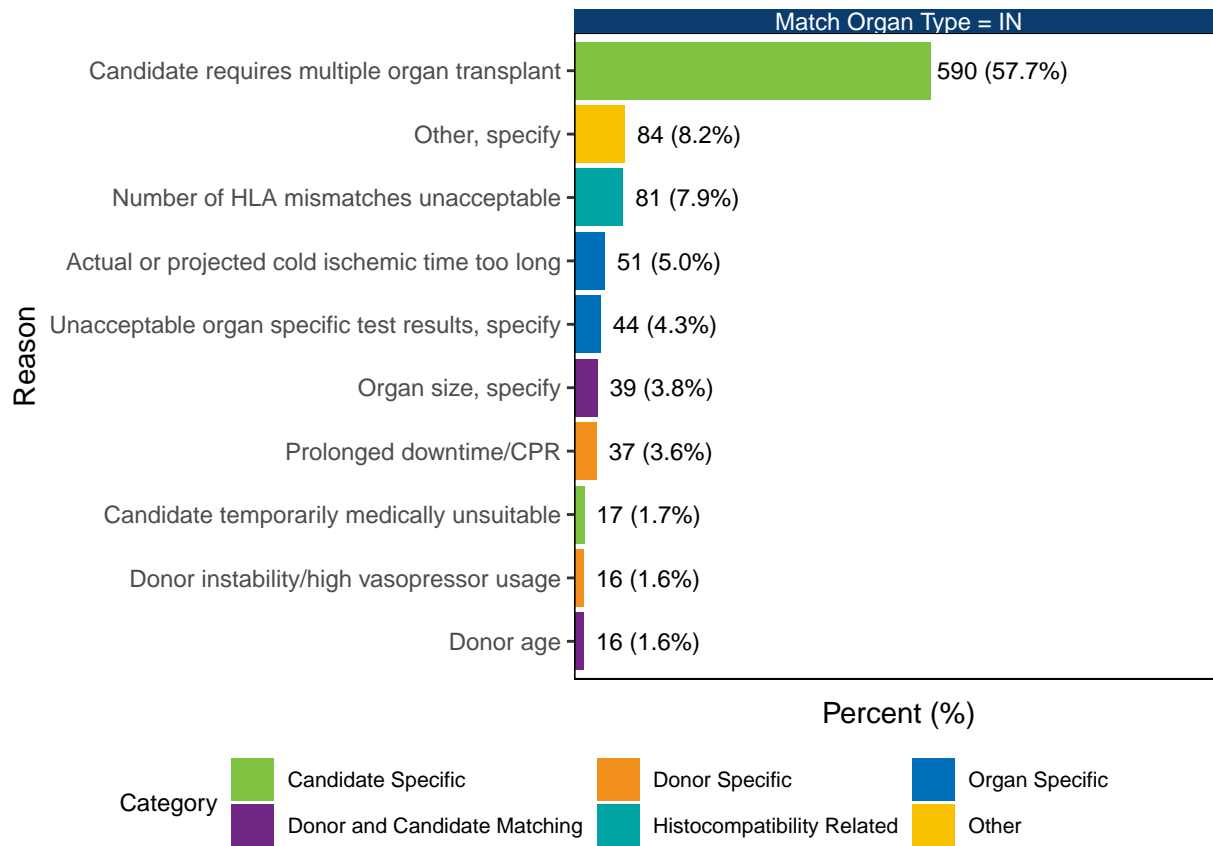

Table 7: Count and percent of reasons for refusal of intestine match organ offers post implementation, for intestine matches submitted December 02, 2021 - December 01, 2022

Category	Description	N	%
Intestine			
Candidate Specific	Candidate requires multiple organ transplant	590	57.67%
Other	Other, specify	84	8.21%
Histocompatibility Related	Number of HLA mismatches unacceptable	81	7.92%
Organ Specific	Actual or projected cold ischemic time too long	51	4.99%
Organ Specific	Unacceptable organ specific test results, specify	44	4.30%
Donor and Candidate Matching	Organ size, specify	39	3.81%
Donor Specific	Prolonged downtime/CPR	37	3.62%
Candidate Specific	Candidate temporarily medically unsuitable	17	1.66%
Donor and Candidate Matching	Donor age	16	1.56%
Donor Specific	Donor instability/high vasopressor usage	16	1.56%
Disease Transmission Risk	Positive infectious disease screening test: CMV, HBV, HCV, etc.	12	1.17%
Disease Transmission Risk	PHS risk criteria or social history	8	0.78%
Organ Specific	Warm ischemic time too long	8	0.78%
Donor Specific	Donor medical history, specify	7	0.68%
Organ Specific	Organ anatomical damage or defect	6	0.59%
Disease Transmission Risk	Donor infection or positive culture	3	0.29%
Candidate Specific	Candidate transplanted or pending transplant	1	0.10%
Disease Transmission Risk	Epidemic/Pandemic - Donor	1	0.10%
Histocompatibility Related	Positive virtual crossmatch/unacceptable antigens	1	0.10%
Logistics	Resource time constraint (OPO, TXC, donor hospital, etc.)	1	0.10%

We also sought to review reasons that have not yet been used, or have only been used a handful of times since the change. Table 8 lists the refusal reasons by category that have been used for less than 10 organ offers, or not at all, by match organ type.

Table 8: Refusal reasons given for less than 10 organ offers for transplant candidates post implementation by match organ type, matches submitted December 02, 2021 - December 01, 2022

Category	Description	Match Organ Type						
		KI	LI	HL	LU	HR	KP	IN

By Program Size

Program size groups were defined based on the following volumes of deceased donor transplants during 2020:

Match Organ Type	Volume Range Definitions			Number of Programs		
	Small	Medium	Large	Small	Medium	Large
KI	[2, 26]	(26, 89]	(89, 455]	79	76	78
LI	[1, 26]	(26, 76]	(76, 181]	48	47	46
HL	[1, 11]	(11, 29]	(29, 148]	49	46	48
LU	[1, 20]	(20, 41]	(41, 142]	23	22	22
KP	[1, 3]	(3, 8]	(8, 30]	38	35	34
IN	[1, 2]	(2, 6]	(6, 18]	6	5	5

Figure 10: Top five reasons for refusal of kidney match organ offers for transplant candidates post implementation stratified by program size, for kidney matches submitted December 02, 2021 - December 01, 2022. Program size defined by volume of deceased donor kidney transplants during 2020.

Figure 11: Top five reasons for refusal of liver match organ offers for transplant candidates post implementation stratified by program size, for liver matches submitted December 02, 2021 - December 01, 2022. Program size defined by volume of deceased donor liver transplants during 2020.

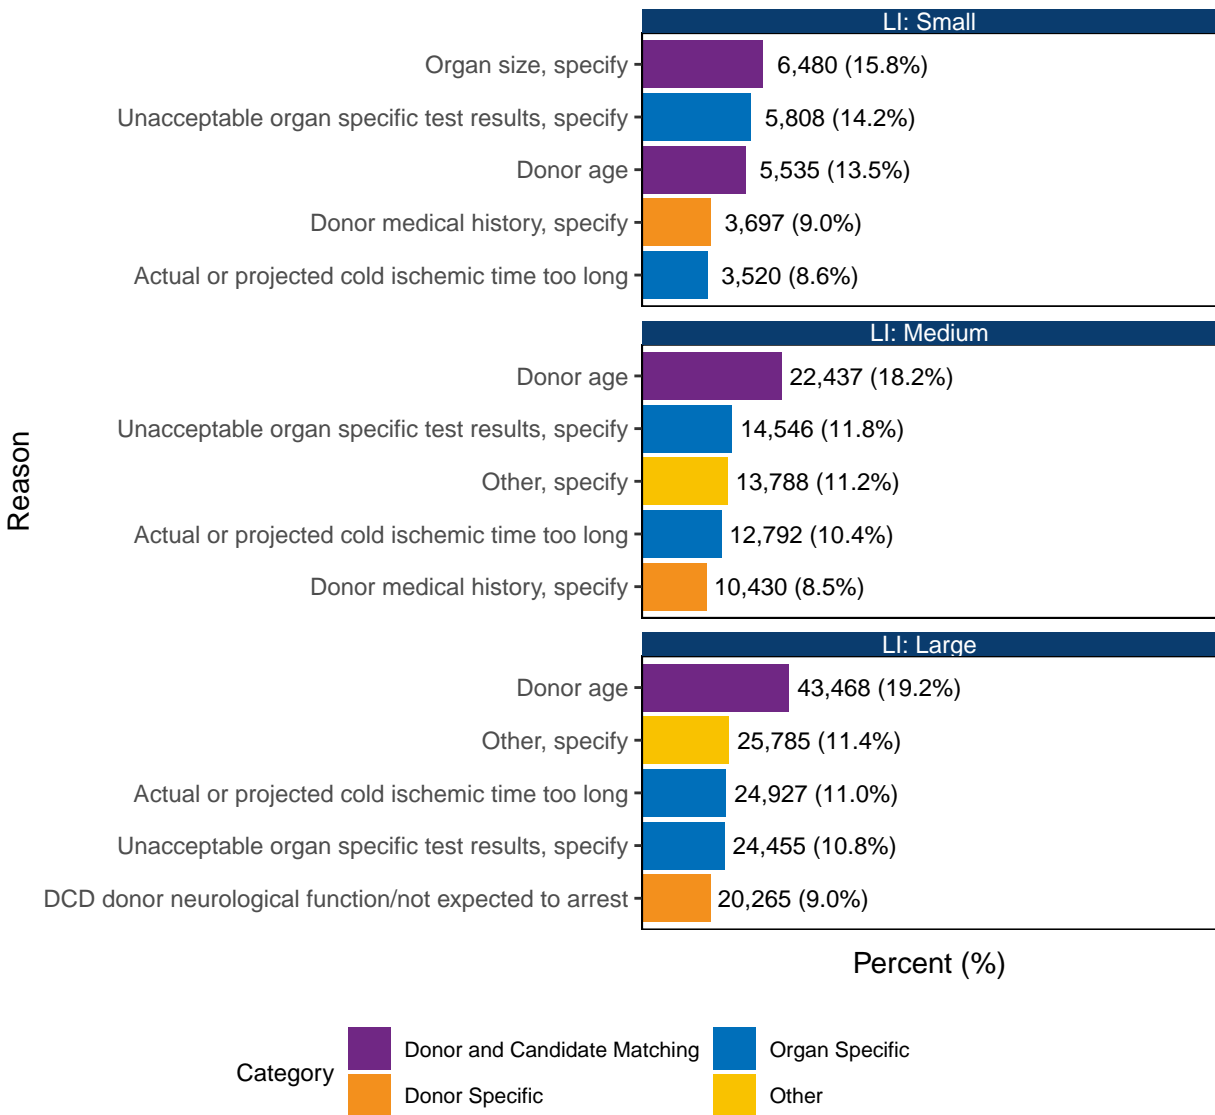

Figure 12: Top five reasons for refusal of heart and heart-lung match organ offers for transplant candidates post implementation stratified by program size, for heart and heart-lung matches submitted December 02, 2021 - December 01, 2022. Program size defined by volume of deceased donor heart and heart-lung transplants during 2020.

Figure 13: Top five reasons for refusal of lung match organ offers for transplant candidates post implementation stratified by program size, for lung matches submitted December 02, 2021 - December 01, 2022. Program size defined by volume of deceased donor lung transplants during 2020.

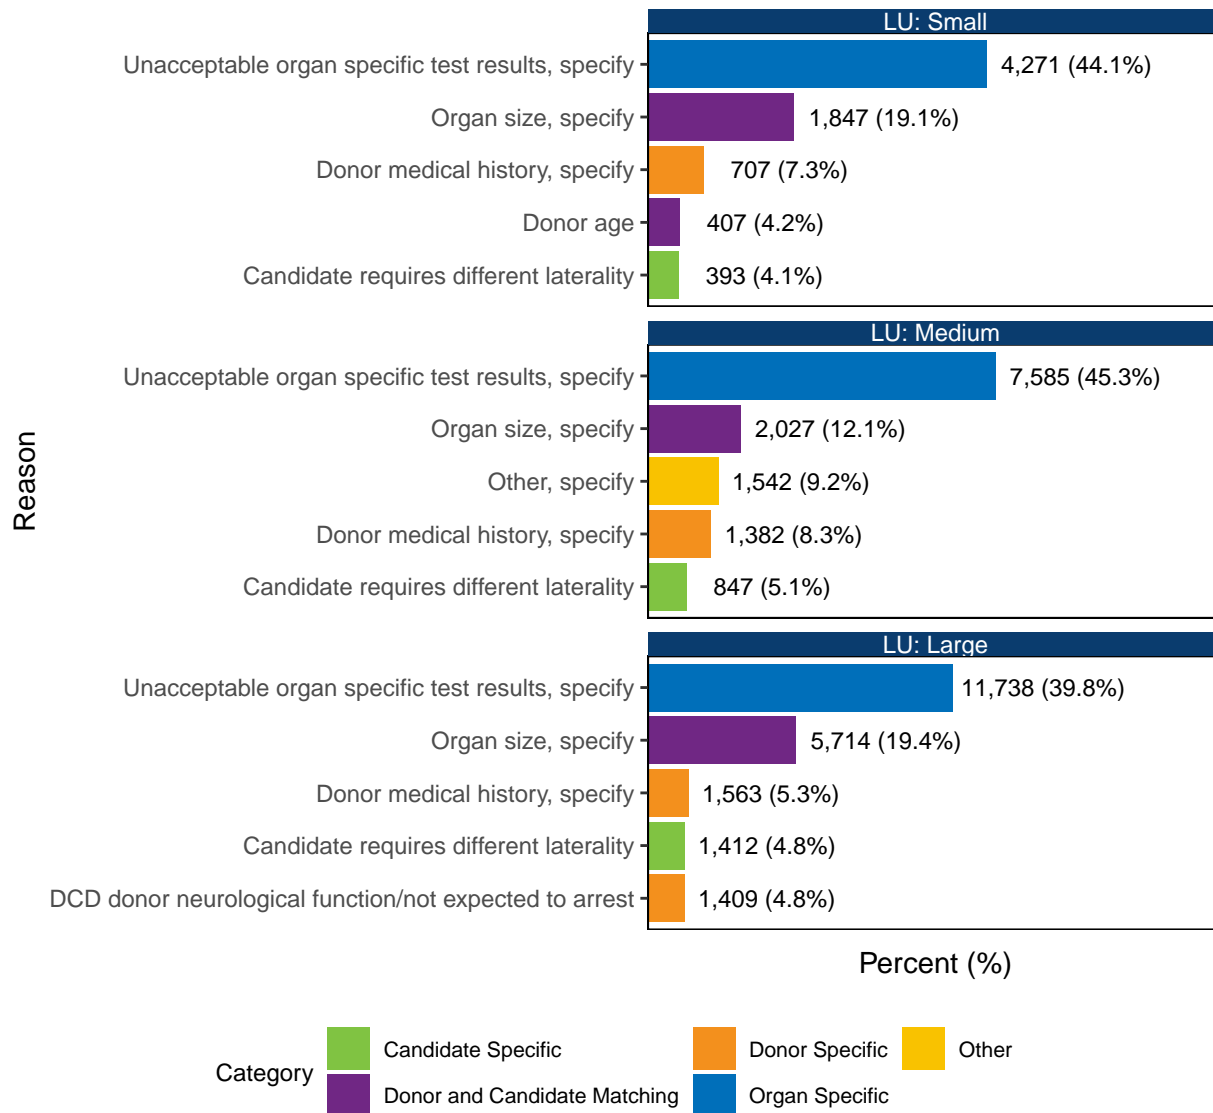

Figure 14: Top five reasons for refusal of kidney-pancreas match organ offers for transplant candidates post implementation stratified by program size, for kidney-pancreas matches submitted December 02, 2021 - December 01, 2022. Program size defined by volume of deceased donor kidney-pancreas transplants during 2020.

By Sequence Number

The following figures group all offers on a match into one category based on the last sequence number of the acceptor on the match. We specify 'last' here as some organs may have more than one final acceptor, e.g. left and right kidney. Sequence number groups were defined by the 90th percentile of sequence numbers for organ acceptors in 2020 as the following:

Match Organ Type	Match Acceptor Sequence Number < 90th Percentile	Match Acceptor Sequence Number ≥ 90th Percentile
HL	[1, 41)	[41, 1396]
IN	[1, 34)	[34, 59]
KI	[1, 667)	[667, 31425]
KP	[1, 29)	[29, 286]
LI	[1, 78)	[78, 7555]
LU	[1, 53)	[53, 514]

Figure 15: Top five reasons for refusal of kidney match organ offers for transplant candidates post implementation stratified by match acceptance number, for kidney matches submitted December 02, 2021 - December 01, 2022. Group was defined by the 90th percentile of sequence numbers for acceptances on kidney matches during 2020.

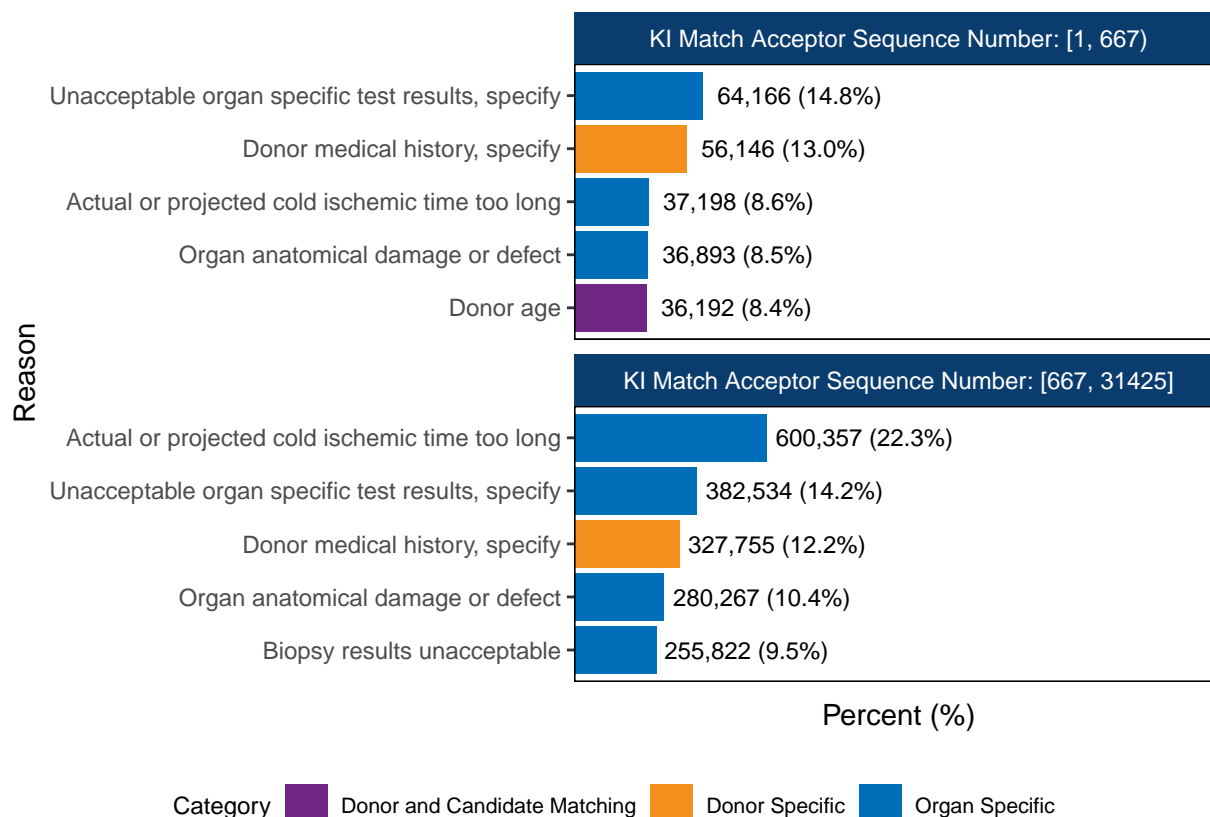

Figure 16: Top five reasons for refusal of liver match organ offers for transplant candidates post implementation stratified by match acceptance number, for liver matches submitted December 02, 2021 - December 01, 2022. Group was defined by the 90th percentile of sequence numbers for acceptances on liver matches during 2020.

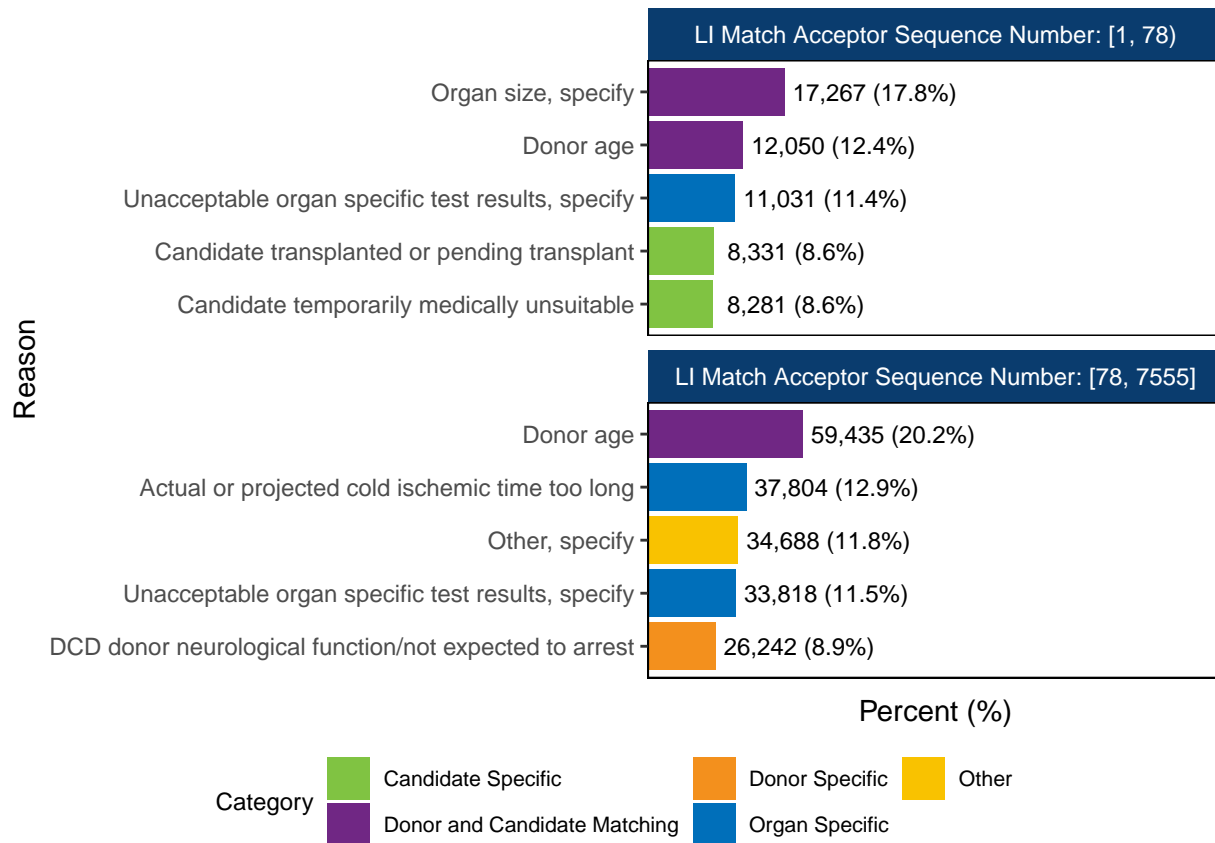

Figure 17: Top five reasons for refusal of heart and heart-lung match organ offers for transplant candidates post implementation stratified by match acceptance number, for heart and heart-lung matches submitted December 02, 2021 - December 01, 2022. Group was defined by the 90th percentile of sequence numbers for acceptances on heart and heart-lung matches during 2020.

Figure 18: Top five reasons for refusal of lung match organ offers for transplant candidates post implementation stratified by match acceptance number, for lung matches submitted December 02, 2021 - December 01, 2022. Group was defined by the 90th percentile of sequence numbers for acceptances on lung matches during 2020.

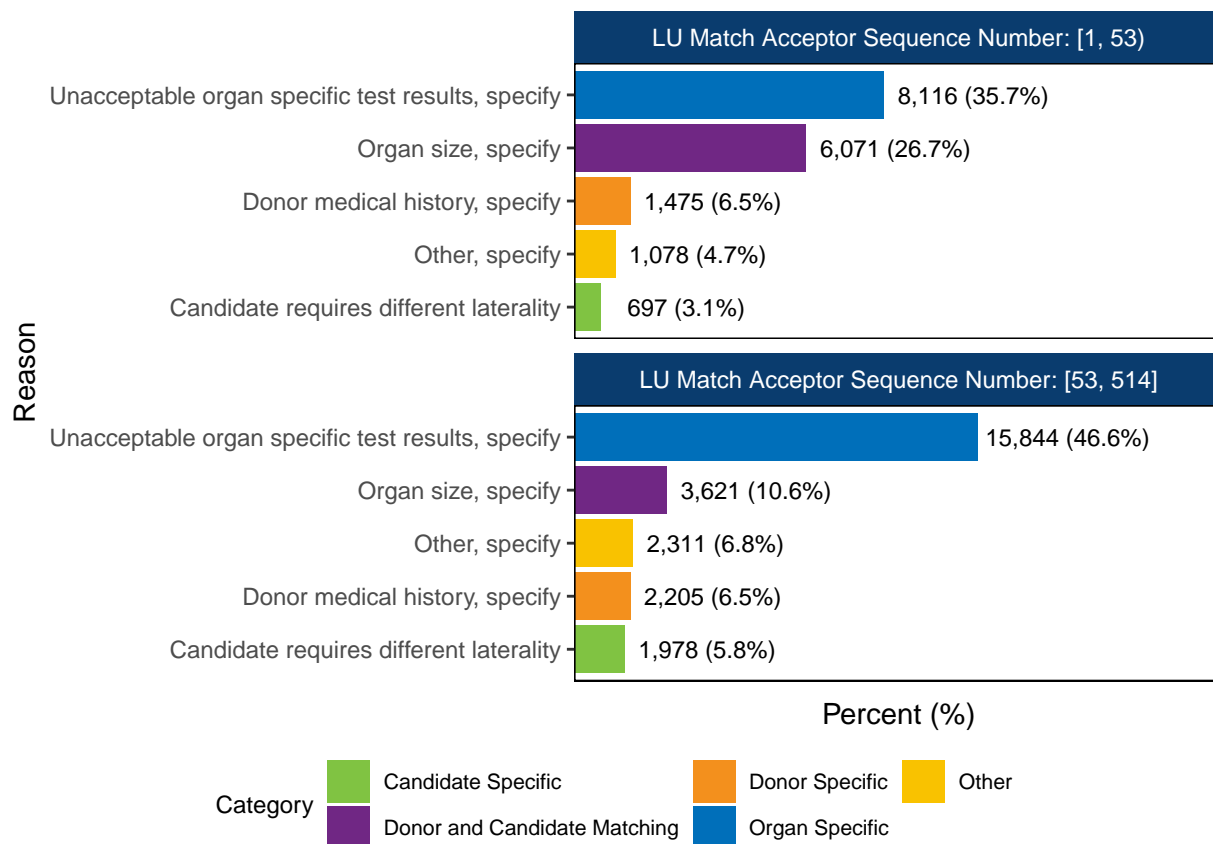

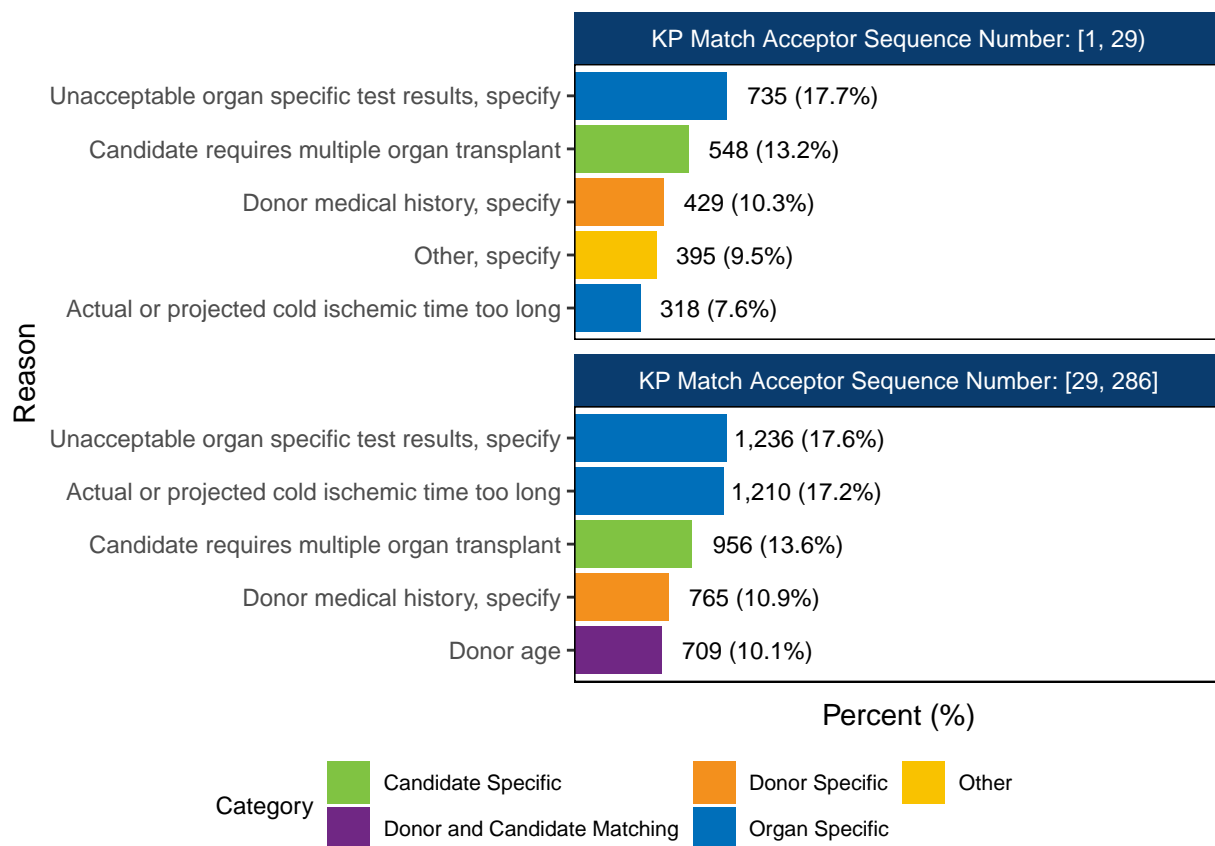

Figure 19: Top five reasons for refusal of kidney-pancreas match organ offers for transplant candidates post implementation stratified by match acceptance number, for kidney-pancreas matches submitted December 02, 2021 - December 01, 2022. Group was defined by the 90th percentile of sequence numbers for acceptances on kidney-pancreas matches during 2020.

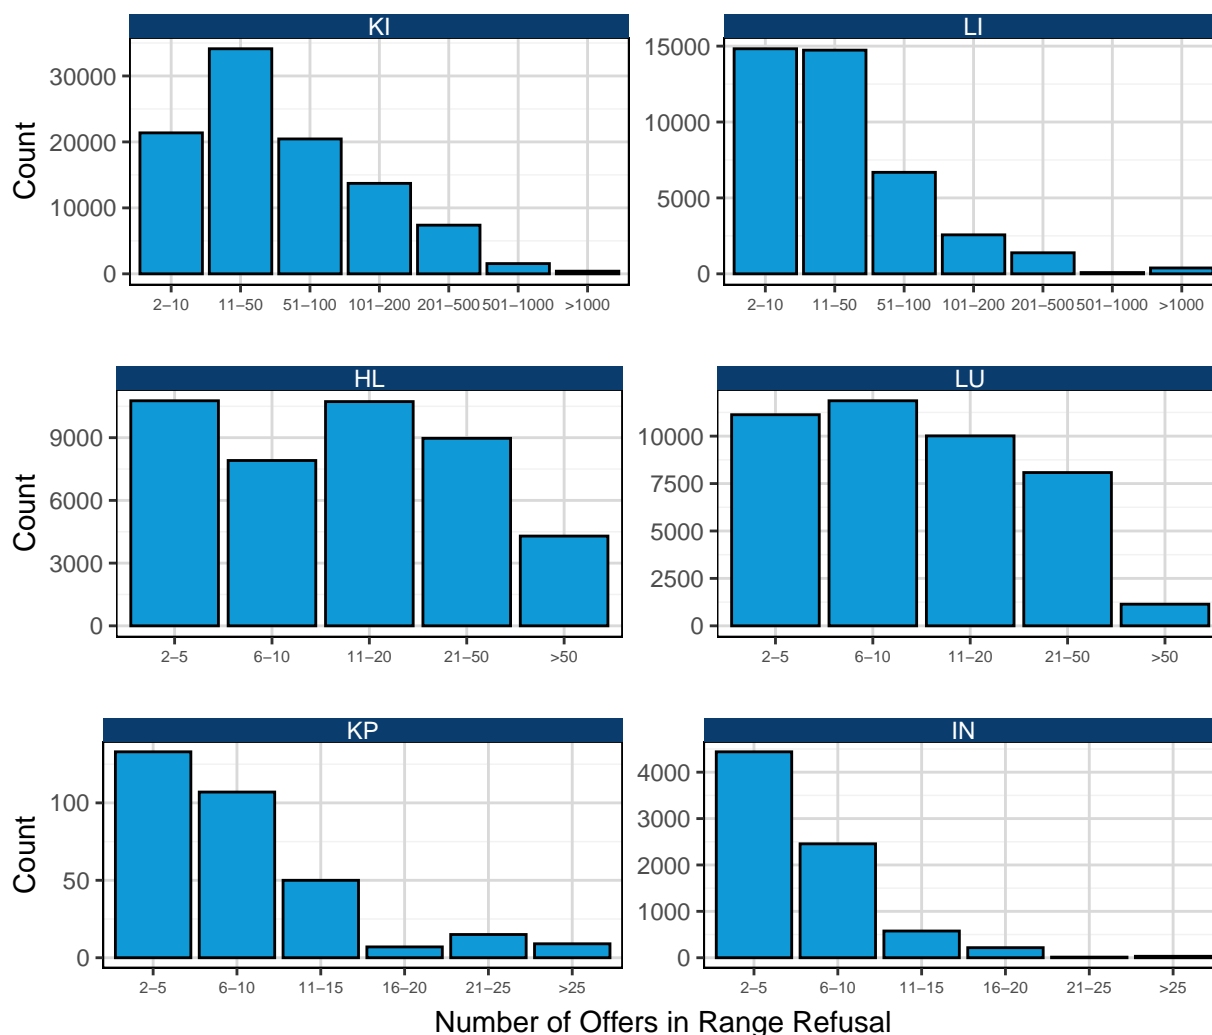

Range Refusals

Transplant centers are not only able to accept or refuse organ offers for an individual transplant candidate, they may also refuse multiple organ offers on a match run for transplant candidates at their center. When this is done, the same reason for refusal is applied for that chunk of organ offers for the transplant candidates. Because the same reason for refusal is used for varying numbers of organ offers in a batch, the following are de-duplicated such that an instance of refusing 15 organ offers for transplant candidates at a center only presents this reason once rather than 15 times. This ensures that the results are not unnecessarily skewed by the number of offers in a range refusal.

Figure 20 indicates how many offers were typically included in a range refusal instance, by match organ type. For kidney and liver matches, there were most often 11-50 offers in a range refusal, though it was possible for there to be upwards of 1,000 offers in a range refusal instance. Heart-lung matches most often included 11-20 offers in a range refusal, though there could be upwards of 50 offers in some. There were most often 2-10 offers in a range refusal for lung matches, 2-5 offers for kidney-pancreas matches, and 6-10 offers for intestine matches.

Figure 20: Number of organ offers in range refusal post implementation by match organ type, December 02, 2021 - December 01, 2022

By Organ

By Program Size

Figure 28: Top five reasons for refusal of range refused kidney match organ offers for transplant candidates post implementation stratified by program size, for kidney matches submitted December 02, 2021 - December 01, 2022. Program size defined by volume of deceased donor kidney transplants during 2020.

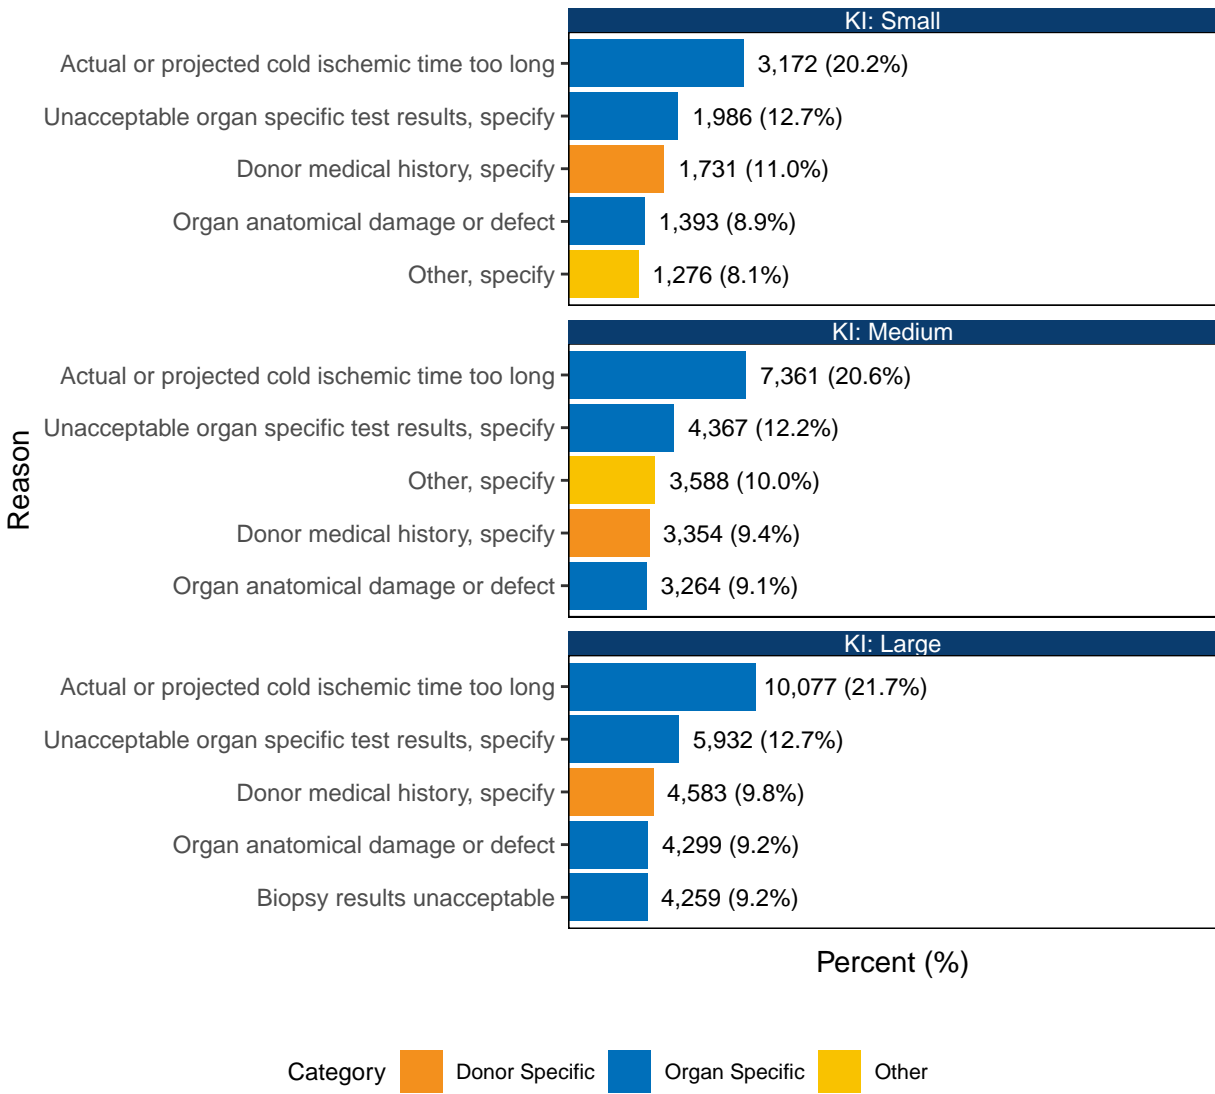

Figure 29: Top five reasons for refusal of range refused liver match organ offers for transplant candidates post implementation stratified by program size, for liver matches submitted December 02, 2021 - December 01, 2022. Program size defined by volume of deceased donor liver transplants during 2020.

Figure 30: Top five reasons for refusal of range refused heart and heart-lung match organ offers for transplant candidates post implementation stratified by program size, for heart and heart-lung matches submitted December 02, 2021 - December 01, 2022. Program size defined by volume of deceased donor heart and heart-lung transplants during 2020.

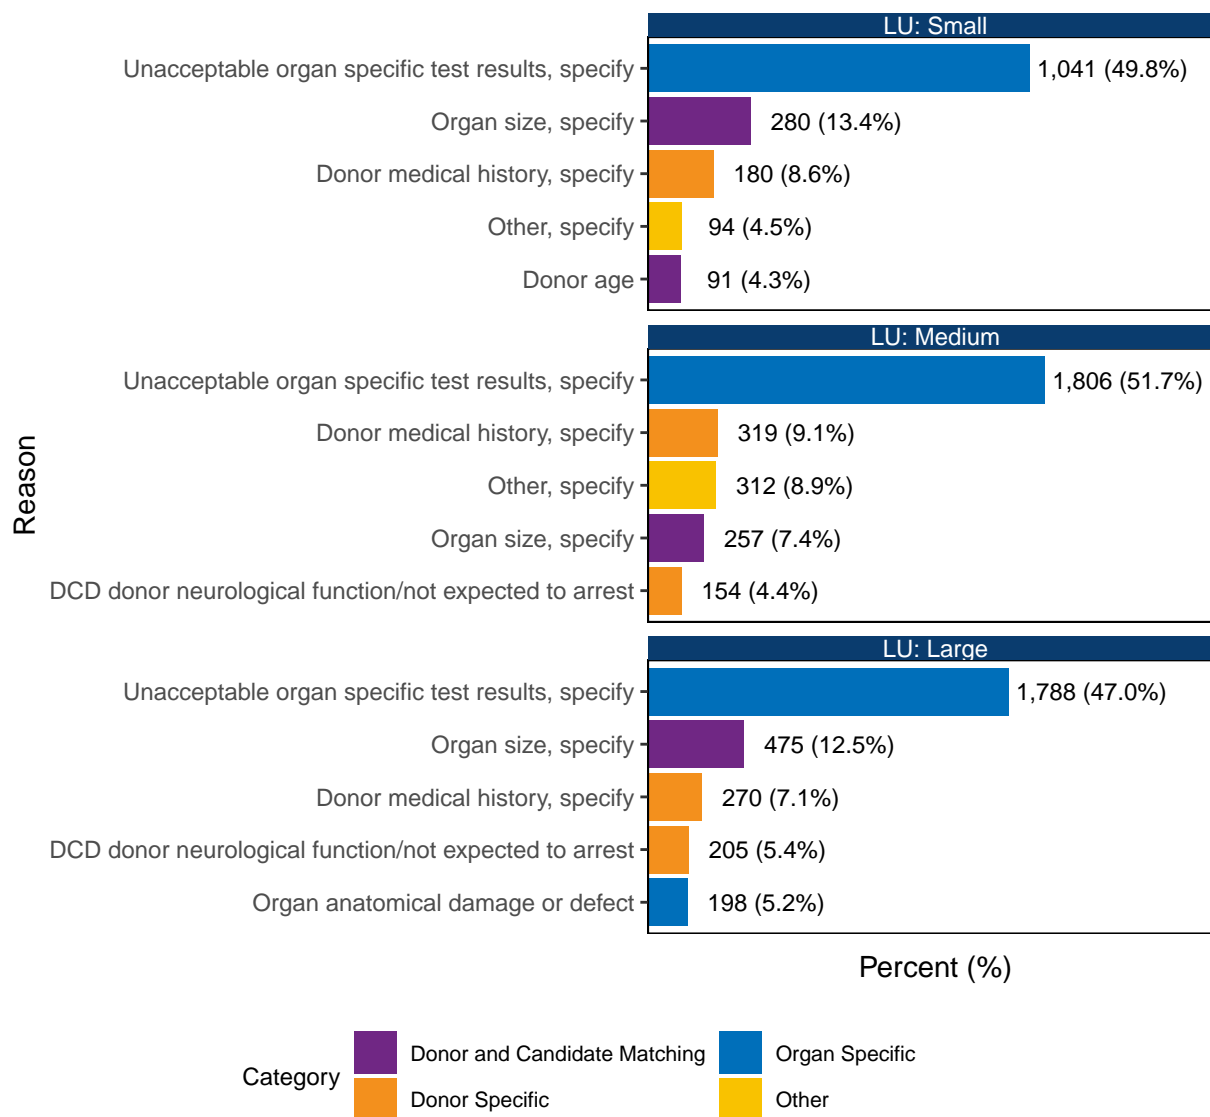

Figure 31: Top five reasons for refusal of range refused lung match organ offers for transplant candidates post implementation stratified by program size, for lung matches submitted December 02, 2021 - December 01, 2022. Program size defined by volume of deceased donor lung transplants during 2020.

By Sequence Number

Figure 32: Top five reasons for refusal of range refused kidney match organ offers for transplant candidates post implementation stratified by match acceptance number, for kidney matches submitted December 02, 2021 - December 01, 2022. Group was defined by the 90th percentile of sequence numbers for acceptances on kidney matches during 2020.

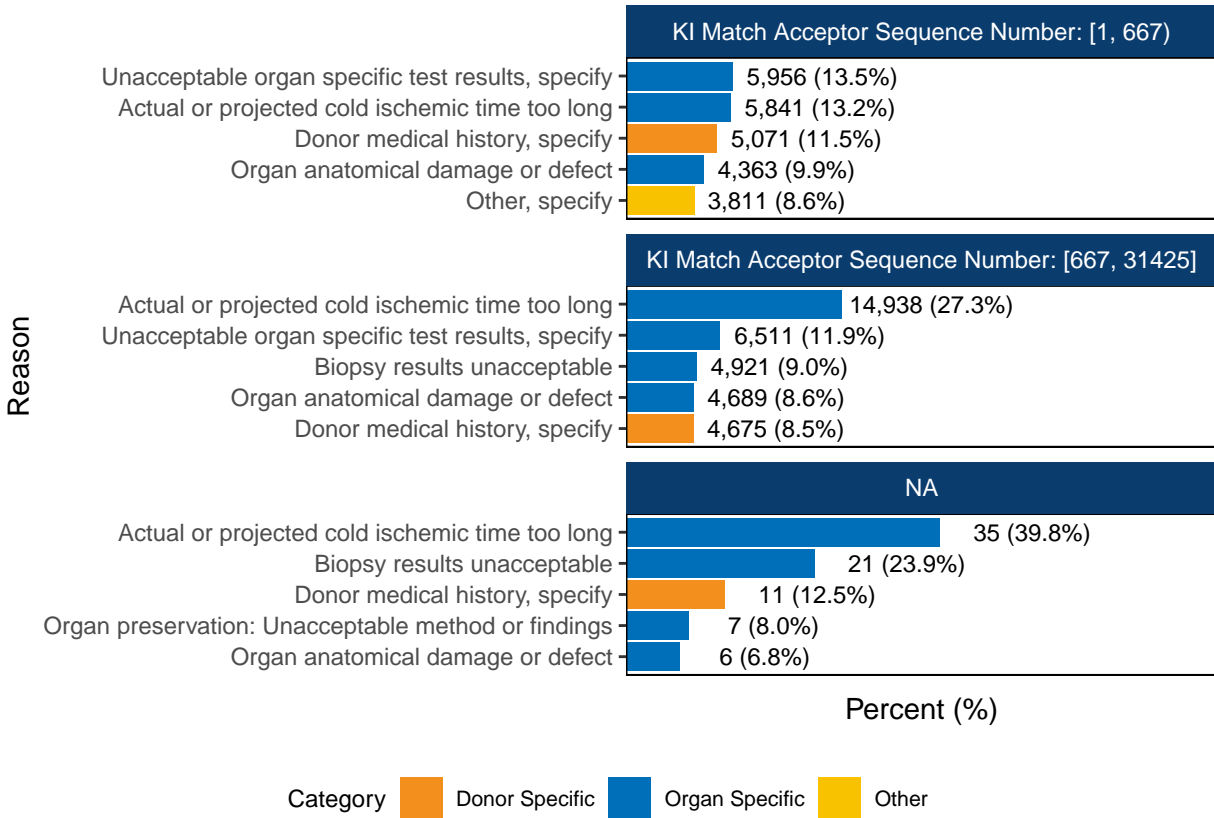

Figure 33: Top five reasons for refusal of range refused liver match organ offers for transplant candidates post implementation stratified by match acceptance number, for liver matches submitted December 02, 2021 - December 01, 2022. Group was defined by the 90th percentile of sequence numbers for acceptances on liver matches during 2020.

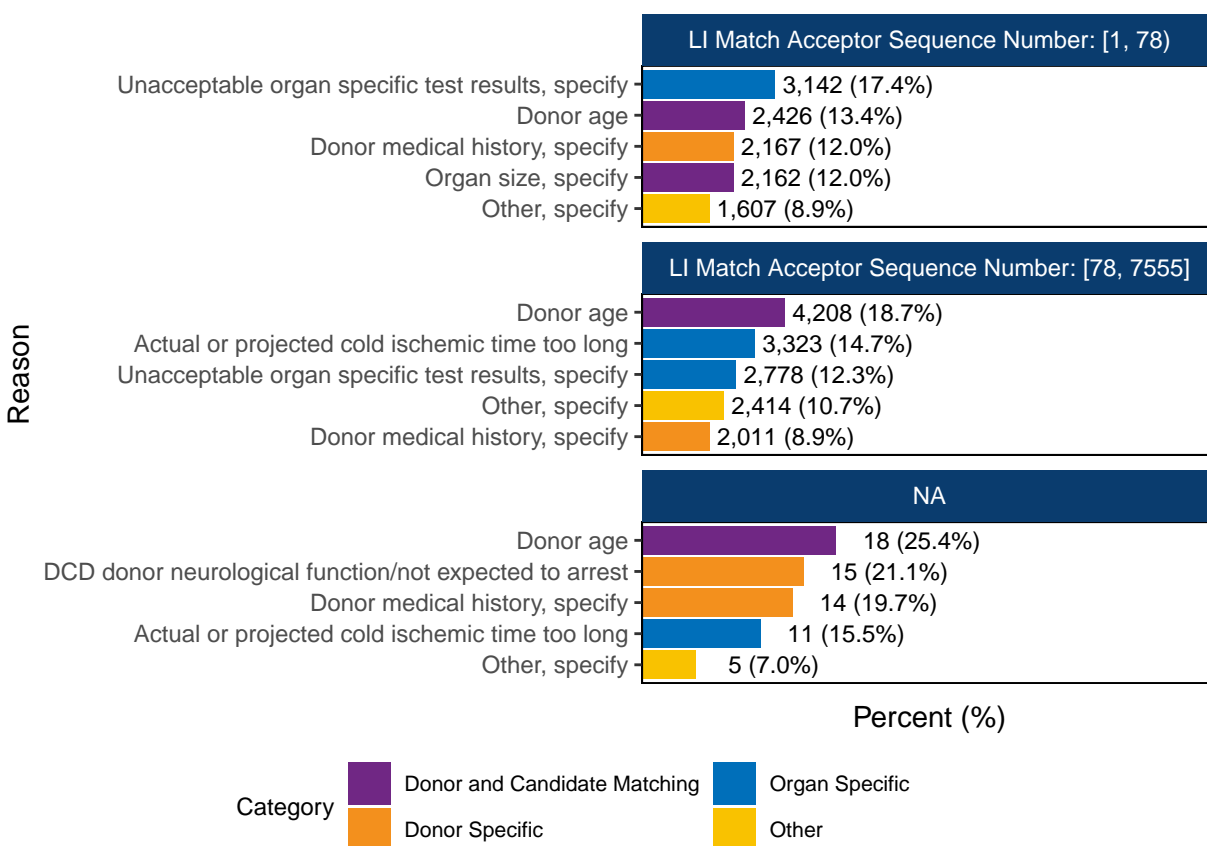

Figure 34: Top five reasons for refusal of range refused heart and heart-lung match organ offers for transplant candidates post implementation stratified by match acceptance number, for heart and heart-lung matches submitted December 02, 2021 - December 01, 2022. Group was defined by the 90th percentile of sequence numbers for acceptances on heart and heart-lung matches during 2020.

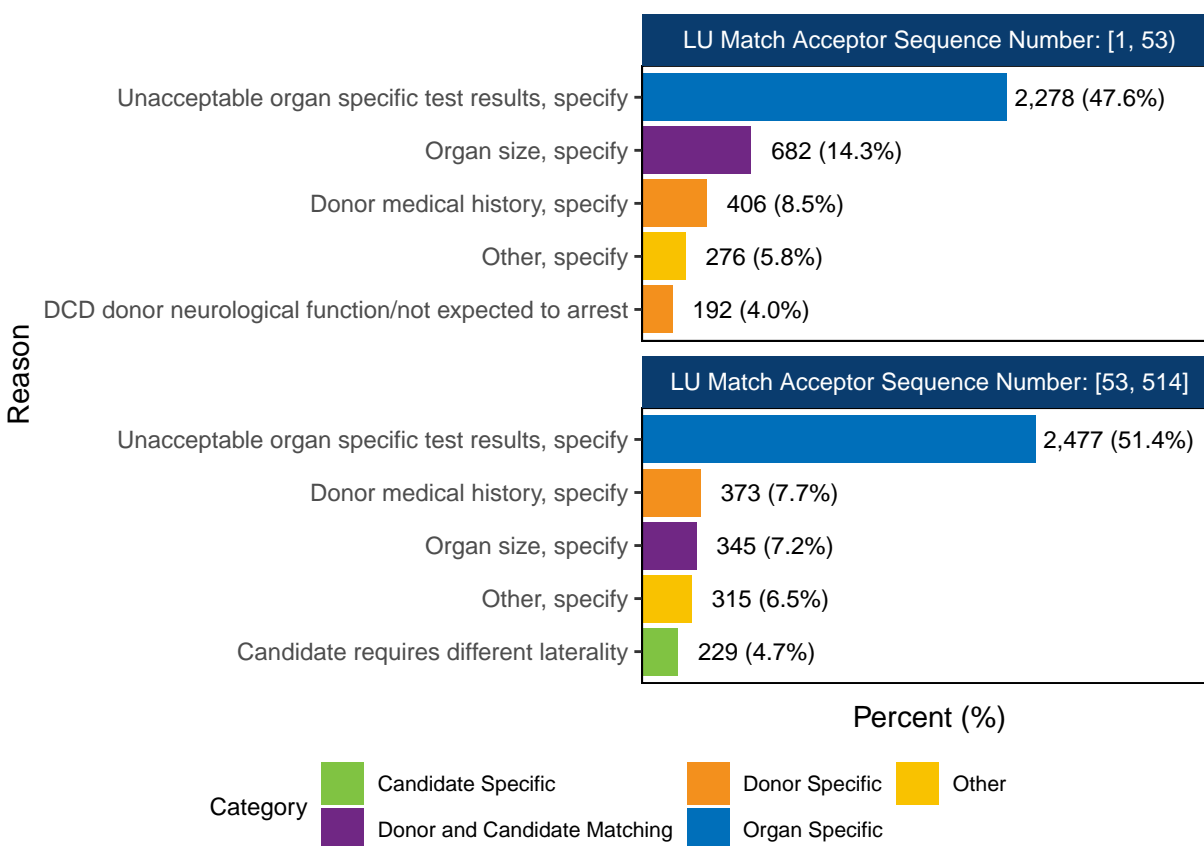

Figure 35: Top five reasons for refusal of range refused lung match organ offers for transplant candidates post implementation stratified by match acceptance number, for lung matches submitted December 02, 2021 - December 01, 2022. Group was defined by the 90th percentile of sequence numbers for acceptances on lung matches during 2020.

“Other, Specify” Free Text Fields

At the request of the DAC, this report also includes an analysis of the use of “Other, specify” organ refusal reasons. We carried out this analysis by analyzing the most frequent word use of any free text entered by the user for a primary or secondary “Other, specify” refusal code for all match types. These codes included:

- 701 - Organ size, specify
- 750 - Donor medical history, specify
- 717 - Unacceptable organ specific test results, specify
- 798 - Other, specify

Note that this analysis was restricted to the post-policy era. Range refusal text was limited to one observation per unique donor and listing center. Standard natural language processing (NLP) pre-processing techniques were used to standardize the free text, accounting for capitalization variation, removing common English words, and removing punctuation, numerals, and additional spacing.

For each included refusal code and match type, an aggregated table of the top 10 words entered, along with a wordcloud displaying the top 20 words entered, is presented below. Note that due to very small numbers, analysis of words reported commonly for IN matches has not been reported here.

701: Organ size, specify

The following graphs and tables report free text words most commonly found in the **701: Organ size, specify** field by organ. Words commonly used in these free text blocks did, in fact, tend to cluster around physical descriptions of size, including “small”, “large”, “undersized”, “bmi”, “big”, “height”, etc., suggesting that the more common responses in this field are providing more detail about the nature of the organ size issue that led to the refusal.

750: Donor medical history, specify

The following graphs and tables report free text words most commonly found in the **750: Donor medical history, specify** field by organ. Words commonly used in this field varied considerably by organ type, but largely included clinical terms that appear to describe things like smoking, drug or alcohol history, circumstances that led to the death (i.e. “trauma”, “cardiac arrest”, “dcd”), or risk of co-occurring infection or comorbidity (e.g. “htn”, “asthma”, “insulin”, “lvh”, etc.).

798: Other, specify

The following graphs and tables report free text words most commonly found in the **717: Other, specify** field by organ. Words captured in this field did seem to vary by theme, with some suggestion that perhaps another listed refusal code would have been more appropriate (e.g. “cit”, “dcd”, “quality”, “anatomy”, “kdpi”, “distance”, “import”, “age”, “bmi”, “covid”, “echo”, “time”, “smoking”, “downtime”). Use of this field in particular should be monitored to determine if there are opportunities for further revision of this option as a refusal code.

Summary

Thus far, it does not appear that any one code has replaced the previously popular “860: Donor age and quality” code across all organs, as no code now comprises the majority of the refusal reasons that code did pre-implementation. There are some differences in the most frequently used reasons for refusal by organ, program size, and whether the last acceptor on a match is within the 90th percentile or not. This also holds true for range refusals.

Furthermore, while common terms used in the more specific “other, specify” codes (i.e. “701: Organ size, specify”, “750: Donor medical history, specify”, and “717: Unacceptable organ specific test results, specify”) largely seemed to reflect those specific themes, suggesting that free text responses are being provided appropriately, the responses in “798: Other, specify” often contained words that at least suggest that other, more specific and informative codes could have been selected. The utility of this more vaguely-defined free text field should be further considered over time.

The implementation of these new refusal reasons appears to have accomplished its goals of providing more relevant, discrete, and mutually exclusive information and promoting the collection of more actionable data. One refusal code no longer dominates refusals across multiple organ types, and the top listed refusal reasons offer more nuanced information than the old **Donor age and quality** code that previously predominated.

Appendix

Table 33: Count and percent of reasons for refusal of kidney match organ offers post implementation stratified by program size, for kidney matches submitted December 02, 2021 - December 01, 2022. Program size is defined by volume of deceased donor kidney transplants during 2020.
